Injectable epoxy anchor adhesive is a two-component, high-strength structural chemical anchor material, which is widely used in engineering fields such as building reinforcement, equipment foundation fixing, bridge guardrails, curtain wall embedded parts, etc. The adhesive consists of components A and B, which are modified epoxy resin and curing agent respectively. They are mixed in proportion on site through special injection tools and injected into the holes to form a strong mechanical and chemical bond with steel bars or screws. Injectable epoxy anchor adhesive is easy to construct and has strong adaptability. It can achieve precise injection in complex positions such as vertical and inverted positions. After curing, it forms a dense, non-shrinking, high-strength colloid, which effectively prevents moisture and impurities in the hole from interfering with the anchoring force.
