Injectable Polyethylene Glycol (PEG) material is a biocompatible and versatile polymer used in medical and pharmaceutical applications. Due to its hydrophilic nature, PEG is often utilized to improve the solubility, stability, and bioavailability of therapeutic agents. In its injectable form, PEG can serve as a drug delivery system, facilitating the controlled release of medications, or as a tissue scaffold in regenerative medicine. The material's low toxicity and ability to be modified with various functional groups make it suitable for a wide range of biomedical applications, including targeted drug delivery, wound healing, and as a lubricant in medical devices.

The global Injectable Polyethylene Glycol (PEG) Material market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
