Viscosupplementation is a medical procedure during which lubricating fluid is injected into a joint. Also called hyaluronic acid injections or hyaluronan injections, viscosupplementation is most commonly used to treat symptoms of symptoms of knee osteoarthritis. Viscosupplementation can significantly reduce pain while improving the mobility and function of the joint to make activities of daily living and even athletic or strenuous exercise less painful. Viscosupplementation is a procedure that involves injecting hyaluronic acid, a gel-like fluid, directly into the joint. Hyaluronic acid is found naturally in the synovial fluid surrounding the joints to reduce friction during movement. The injection goes into effect by lubricating the joint and assisting the synovial fluid to create more cushion. This works to reduce pain and improve the range of motion or the mobility of the joint.
