Injection mixing nozzle is a device used in various applications where two or more fluids need to be mixed together in a precise and controlled manner. It consists of a mixing chamber through which the fluids flow, and a series of nozzles that inject the fluids into the mixing chamber. The injection nozzles are designed to produce a fine spray or mist of each fluid, which then mixes thoroughly in the chamber. The amount and ratio of each fluid can be adjusted by controlling the flow rate and pressure of the injectors. Injection mixing nozzles are used in a variety of applications, including chemical

processing, food manufacturing, and water treatment.
