Injection mold hot runner system is a key technology in the injection molding process. It introduces heating elements into the mold to ensure that the molten plastic maintains a constant temperature before flowing into the mold cavity. Hot runner systems can improve the quality of injection molded products, increase production efficiency, and reduce costs. Hot runner systems use materials that are more resistant to high temperatures and corrosion, as well as coating technologies with better thermal conductivity. Injection mold hot runner systems will continue to strive to improve the efficiency, precision and sustainability of injection molding to meet evolving manufacturing needs and market trends.
