Injection mold inserts are metal or non-metal parts pre-placed into the mold cavity, which combine with the molten plastic during the injection molding process to form an integrated part. Inserts can enhance local strength (such as threaded inserts), conductivity (such as copper contacts) or functional complexity, and are widely used in electronics, automobiles, medical and other fields. Its processes are divided into two categories: in-mold insert injection (IMD) and post-assembly inserts, which require precise positioning and thermal expansion coefficient matching to avoid defects.

United States market for Injection Mold Inserts is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
