Injection-Molded Bearing Cage refers to a bearing cage manufactured from engineering plastics through injection molding, used to maintain stable positioning and even distribution of balls or rollers within a rolling bearing to reduce friction, decrease noise, improve operational smoothness, and extend service life. Injection-molded cages have advantages such as light weight, corrosion resistance, and high dimensional consistency, and are widely applied in electric motors, automotive systems, household appliances, wind turbines, and industrial transmission equipment. They are an essential structural component in modern rolling bearing design. In 2025, the global market size of injection-molded bearing cages is approximately USD 523.8 million, with annual shipments of about 88.0 million units. The market is expected to grow at a compound annual growth rate (CAGR) of around 5.6% over the next five years. The average market price is approximately USD 5.95 per unit, typical single-line production capacity ranges from 5,800,000 to 21,500,000 units per year, and industry gross margins generally fall within the 19%–33% range.
