The global Injection Molding Materials market size is predicted to grow from US$ 322890 million in 2025 to US$ 453360 million in 2031; it is expected to grow at a CAGR of 5.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Injection molding is used to produce a wide range of products made from various raw materials, including plastics, metals such as iron, aluminum, copper, precious metals, and carbide.

Injection molding can be achieved with a host of components consisting of metals, elastomers, glasses, confections and polymers.

The market growth is expected to be driven by the increasing demand for mass production of thousands of identical components at lower costs coupled with design flexibility, precision from various end-user industries such as packaging, medical, and electronics. Furthermore, countries such as China, India, South Korea are focusing on strengthening domestic manufacturing to hedge themselves from future disruptions which are expected to boost the market demand. The injection molding market in the U.S. witnessed a transition due to the COVID-19 pandemic as the players are increasing capacity to meet the growing needs of the market. Factors such as the rising number of manufacturers using medical injection molding technology, increasing demand for medical equipment, and growing healthcare expenditure in the country are expected to positively affect the growth.
