The ink abrasion resistance tester is a special testing equipment used to evaluate the ink adhesion and friction resistance of printed surfaces. It simulates mechanical effects such as friction, scratching or abrasion to measure the degree of ink layer shedding or color change after repeated friction. The instrument is widely used in packaging printing, labels, banknotes, electronic products and automotive interiors to ensure the durability of printed products during transportation, storage or use. The test methods include dry abrasion (such as RCA tape friction), wet abrasion (such as alcohol friction) and eraser test, which comply with industry standards such as ASTM F2357 and ISO 2836.
