The offset plate color display instrument, also known as the ink proofing machine or IGT printing suitability instrument, is a complete imitation of the working principle of a printing machine. The pressure is adjustable, and the substrate is wide. It is suitable for printing, packaging, and ink enterprises, accurately predicting the ink color phase. It can be displayed once in 2 minutes, and cleaning is also very convenient, saving paper, ink, water and electricity waste caused by printing machine color display. At the same time, it avoids the excessive occupation time caused by color mixing in the printing machine, effectively improving the production efficiency of the printing machine.
