They utilize e-ink (E-Ink) technology to display text, icons, or QR codes, and can show meeting agendas, attendee names, department information, or interactive content. Compared to traditional paper nameplates, their advantages include low power consumption, long display time without continuous power supply, convenient information updates, ease of management, and environmental friendliness. They are widely used in corporate meetings, government agencies, hotel conference rooms, exhibitions, and remote collaboration scenarios.

The Ink Screen Electronic Conference Table Sign industry chain mainly includes upstream e-ink screen and driver chip manufacturers, control system and wireless communication module suppliers; midstream OEM design and manufacturing companies; and downstream system integration and channel sales. Furthermore, software platforms and cloud management systems are also core components, used for information dissemination, unified management, remote updates, and data analysis, thus forming a complete ecosystem of 'hardware + software + services.'
