The global Inkjet Cutter market size is predicted to grow from US$ 176 million in 2025 to US$ 233 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

The Inkjet Cutter is a hybrid processing device integrating digital inkjet printing and high-precision mechanical cutting, enabling simultaneous pattern deposition and contour cutting on material surfaces through synchronized control of inkjet heads and cutting tools. The device employs non-contact inkjet technology, utilizing piezoelectric or thermal inkjet principles to deposit functional inks (e.g., UV-curable, water-based dyes) onto substrates, while a Computer Numerical Control (CNC) system drives a rigid cutting carriage or laser module to execute complex material shaping along predefined vector paths. Its technical advantage lies in eliminating segmentation of traditional processes, achieving seamless integration of "printing-cutting" workflows for personalized customization and small-batch production of flexible materials (e.g., textiles, films, leather). Additionally, the device supports multi-layer printing and dynamic path optimization algorithms, significantly enhancing processing efficiency and edge quality for intricate patterns, serving as a critical component in digital printing and intelligent manufacturing.

United States market for Inkjet Cutter is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
