An inkjet labeling system is a type of labeling equipment used in various industries to apply labels, markings, or codes onto products, packages, or containers using inkjet printing technology. These systems utilize inkjet printheads to create high-resolution text, graphics, barcodes, date codes, lot numbers, and other information directly onto surfaces such as labels, cartons, bottles, or packaging materials. Inkjet labeling systems offer flexibility, speed, and customization capabilities, making them suitable for a wide range of applications, including product labeling, packaging, and traceability in industries like manufacturing, food and beverage, pharmaceuticals, and logistics.

The need for traceability and serialization in industries such as pharmaceuticals, food, and beverages continued to drive the adoption of inkjet labeling systems. These systems enable the printing of unique identification codes, barcodes, and serial numbers on products and packaging for compliance with regulatory requirements and improved supply chain management.
