The global Inline Ground Fault Circuit Interrupters market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The importance of electrical safety has driven the demand for GFCIs, including inline GFCIs. These devices are used to prevent electrical shocks and fires caused by ground faults, making them essential in residential, commercial, and industrial settings. Regulatory requirements and building codes in various regions often mandate the use of GFCIs in specific applications. This has contributed to the steady demand for inline GFCIs, especially in locations with strict safety regulations. Inline GFCIs are commonly used in outdoor and wet environments where the risk of electrical hazards is higher. This includes applications such as outdoor outlets, construction sites, and recreational areas.
