The global Innovations in Biologics and Biosimilars market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Biologics are very specific, highly effective medicines made in living cells, and historically this was often an animal. Biologics include hormones, cytokines, growth factors, vaccines, gene and cellular therapies, fusion proteins, insulin, interferon, and monoclonal antibody (mAb) products.

A biosimilar (also known as follow-on biologic or subsequent entry biologic) is a biologic medical product that is almost an identical copy of an original product that manufactured by a different company. Biosimilar are officially approved versions of original ?innovator? products and can manufactured when the original product's patent expires. Reference to the innovator product is an integral component of the approval.
