The global Inorganic Phase Change Material market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Inorganic phase change material (PCM) refers to a substance that has the ability to absorb or release thermal energy as it transitions between solid and liquid states. Unlike organic PCMs, which are composed of carbon-based compounds, inorganic PCMs are typically made from non-carbon-based materials such as salts, metals, or ceramics. These materials undergo phase transitions at specific temperature ranges, allowing them to store and release thermal energy efficiently.
