The global Inorganic Warm Box Binder market size is predicted to grow from US$ 127 million in 2025 to US$ 177 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Inorganic Warm Box Binder is an emission-free silicate binder system primarily used in the foundry industry. It consists of a liquid binder and powder additives, and its strength is achieved through heat curing. It is environmentally friendly and heat-resistant. It can bond sand cores together without producing harmful gases during the casting process, making it suitable for various sand core bonding and repair applications.

The upstream components include water glass (sodium/potassium silicate), modifiers/inorganic additives, and sand materials. Global sales in 2024 were approximately 50,000 tons, with an average market price of about US$2,500 per ton. The scale of a single production line varies depending on the production process and investment scale. The industry's gross profit margin ranges from 20% to 35%.

United States market for Inorganic Warm Box Binder is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
