Inorganic waterproof plugging compound is a construction repair material made by mixing inorganic cementitious materials with fine aggregates and water. It features rapid setting, high water resistance, corrosion resistance, and heat resistance. Commonly applied to concrete and masonry substrates, it is widely used for emergency repairs in underground structures, tunnels, and pipe joints. Its inorganic composition ensures excellent waterproofing performance and long-term stability.

In 2024, global Inorganic Waterproof Plugging Compound production reached approximately 510 k tons, with an average global market price of around US$370 per ton. This product typically has a single-line production capacity of 5,000-10,000 tons per year, with an industry gross profit margin of approximately 18%-30%. Raw materials account for the largest portion of costs (approximately 70-85%), followed by manufacturing/processing costs, labor, depreciation, and transportation/packaging fees. The upstream suppliers of this product include cement, sand and gravel/mineral fillers, chemical additives, pigments/anti-corrosion fillers, and other suppliers. The downstream market includes construction contractors/waterproofing teams, real estate developers, and infrastructure construction.

United States market for Inorganic Waterproof Plugging Compound is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
