Abstracts

The global Insect-based Pet Food market size is predicted to grow from US$ 141 million in 2025 to US$ 241 million in 2031; it is expected to grow at a CAGR of 9.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Insect-based pet food is pet food consisting of, or containing insects digestible by pets such as dogs or cats. A limited, but growing number of products are available on the market, including insect-based cat food, dog food, and pet treats.

The insect-based pet food market is experiencing rapid growth, mainly due to consumers' increased attention to sustainability and pet nutrition. As an environmentally friendly and resource-efficient protein source, insects such as black soldier flies and crickets are processed into pet food, meeting the market's demand for healthy and environmentally friendly products. Companies in the industry continue to increase their R&D investment and launch a variety of insect-based pet foods to cater to the needs of different pets and their owners, while also working hard to solve challenges in production scale, cost control and regulatory compliance.

In the future, with technological advances and the realization of large-scale production, the cost of insect-based pet food is expected to be further reduced, making this type of product more affordable. In addition, with the increasing public awareness of environmental protection and the growing demand for high-quality pet food, insect-based pet food will develop further. At the same time, scientific research institutions and
