Insect Detection and Reporting System is an insect detection and reporting tool. It uses modern light, electricity, and numerical control integrated counting to realize automatic far-infrared processing of insects, transportation with conveyor belts, and automatic operation of the entire lamp. The system consists of pest trapping system, treatment system (infrared insecticide, pest drying, tiled transmission), shooting system, transmission system, and agricultural pest forecasting system. Under unsupervised conditions, it can automatically complete operations such as attracting insects, killing insects, dispersing insects, taking pictures, transmitting, collecting, and draining, and uploading the pest categories and counts to the agricultural insect forecasting platform in real time, and displaying them on the web page Terminal display, according to the identification results, the occurrence and development of pests are analyzed and predicted.
