## Abstracts

The global Insecticide for Stored Grain market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Pesticides are chemicals used to control pests and are often highly toxic. Cereal pesticides refer to pesticides specifically designed to control pests stored in grains. These pesticides can kill or repel pests in grains and protect the quality and safety of grains.

Ongoing market pressure in the post-harvest stage and increasing focus on reducing post-harvest losses are the major factors driving the market growth. The lack of storage facilities on many small-scale farms in various countries makes it impossible to store surplus grains, leading to increased post-harvest losses. In addition, governments around the world are paying more and more attention to dealing with the looming grain storage crisis and increasing investment in the construction of high-tech granaries. This may increase the demand for insect grain protectants. The global pandemic has led to increased grain inventories and storage due to supply chain disruptions. To protect stored grain from pests, farmers have an increasing demand for stored grain pesticides.
