An Insert Nut is a material used to increase the strength of the fastening portion of a plastic material. Since resin is less strong than bolts, insert nuts, which are mainly made of metal, are embedded in resin to strengthen the joint.

The outer surface of the insert nut is knurled so that it can be adhered to the resin, and the inner surface is a nut-threaded member.

Insert nuts are generally made of free-cutting brass or lead-free brass, which has excellent machinability and ductility. Aluminum or stainless steel may also be used. Resin inserts are also available and are used for automotive and other applications.

The global Insert Nut market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
