Inside rail cable hoist is a heavy-duty loading device that installs a cable pulley system between the longitudinal beams of the vehicle body (i.e., the inner rail of the chassis). It is mainly used on roll-on/roll-off trucks to achieve efficient loading and unloading of waste containers, garbage bins, and construction waste boxes. Compared with the outer rail structure, the inside rail cable hoist has a more compact layout and a lower center of gravity design, making the vehicle more stable during operation. It is suitable for narrow streets in cities and short- and medium-distance high-frequency loading and unloading scenarios. This type of equipment usually consists of a main cable group, a pulley guide system, a hydraulic power unit, and an anti-skid locking mechanism, with a lifting capacity ranging from 10,000 to 75,000 pounds. Its cable runs inside the track to reduce exposed parts and improve durability and protection. With the increasing demand for mechanization of municipal solid waste management and rapid removal of construction waste, the inside rail cable hoist is widely used in medium-sized sanitation fleets and waste recycling operations in North America and Europe due to its reliability and high loading and unloading efficiency.
