The report requires updating with new data and is sent in 48 hours after order is placed.

Nowadays, most of the damaging threats of security are not from the cybercriminals, malware authors, hackers, or any other bad actors but instead they arise from the trustworthy insiders whether negligent or malicious who have access to systems as well as sensitive data. The organizations are mostly worried about inadvertent insider breaches (careless user causing accidental breach), a negligent data breach (user willfully ignoring policy, but not malicious), and malicious data breach (user willfully causing harm). Insider threat protection enables early detection of such attacks and remediates active threats as well as prevents any interruptions that may occur in the future.
