Inspection camera, sometimes called a borescope, forms a key product technology in machine vision market. The optical technology in inspection cameras enable the viewing of the areas or spaces that are inaccessible, cramped, or at a very far away distance. Thus, these are similar in functionalities to cameras, telescopes, or microscopes. Borescopes are frequently equipped with several LED lights that helps in illuminating the work areas. Some inspection cameras enable remote viewing by detaching while once the camera shaft is maneuvered, display images can be observed.

The inspection cameras market is part of the surface vision industry. Surface vision is a technology that is used to provide imaging-based automatic inspection as well as analysis of the captured images of an object. Mass production in manufacturing industries is expected to drive the demand for inspection cameras.
