An Instrument Air Package consists of all the necessary equipment – air compressors, air receiver, air dryer and air filtration – to enable the supply of instrument quality air to a facility. Instrument quality air must be free of contaminants and water vapour, and should conform to the international ISO standard for compressed air quality. A completely self-sufficient instrument air package can be packaged within an enclosure and shipped to the site for simplified installation and commissioning. Even the smallest of air compressor packages can be provided as a complete, pre-engineered and turn-key system.

The global Instrument Air Packages market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
