Insulated carbon film fixed resistors are a type of fixed resistor whose resistance value remains unchanged. It is formed by coating a layer of suspension composed of carbon ink, graphite and filler on an insulating substrate (such as a porcelain rod or porcelain tube) and polymerizing it after heating. This layer of carbon film forms the main body of the resistor. Different resistance values ??can be obtained by changing the thickness of the carbon film or changing the length of the carbon film by notching.

Insulated carbon film fixed resistors are widely used in electronic circuits with low precision requirements such as household appliances and instruments. Due to its low price and wide range of uses, it is still widely used in consumer electronic products.

The global Insulated Carbon Film Fixed Resistors market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
