Insulated drinkware, or double-walled cups, are general cups that has outer and inner walls to maintain temperatures of drinkables. The inner wall of insulated cups is generally made up of stainless steel whereas the outer wall can be made up of plastic, stainless steel or any other types of materials that have been used for surfacing since last few years. Sometimes, glass, ceramics or plastics can be used as interiors for insulated cups. Apart from these materials, various other materials are used for the manufacturing of insulated cups including styrofoam, paper, and acrylic. These alternatives are predominantly suitable for those with a sharp palate who do not like the taste when drinking from metal, especially with some kinds of beverages. Insulated cups are gaining ground gradually with the increasing food service restaurants and cafés.
