An Insulating Glass Automatic Sealing Line is a high-efficiency, automated system designed to apply the secondary sealant—typically silicone or polysulfide—around the edges of insulating glass units (IGUs). This line integrates robotic or servo-controlled arms to precisely follow the glass perimeter, ensuring uniform sealant application, minimal waste, and strong adhesion. Often positioned at the final stage of IGU production, the sealing line enhances the unit's airtightness, moisture resistance, and structural strength. It is compatible with double and triple glazing, supports various spacer types, and can be seamlessly integrated into fully automatic glass production workflows.
