Insulators are used in electrical equipment to support and separate electrical conductors without allowing current through themselves. An insulating material used in bulk to wrap electrical cables or other equipment is called insulation. The term insulator is also used more specifically to refer to insulating supports used to attach electric power distribution or transmission lines to utility poles and transmission towers. They support the weight of the suspended wires without allowing the current to flow through the tower to ground.

China is the largest market, with a share over 40%, followed by North America and Europe, both have a share over 50%.

In terms of product, Suspension Glass Insulators is the largest segment, with a share over 70%. And in terms of application, the largest application is Distribution & Railway, followed by HVDC, HVAC, etc.
