According to our LPI (LP Information) latest study, the global Intake Manifold System market size was valued at US\$ 30430 million in 2022. With growing demand in downstream market, the Intake Manifold System is forecast to a readjusted size of US\$ 49370 million by 2029 with a CAGR of 7.2% during review period.

The research report highlights the growth potential of the global Intake Manifold System market. Intake Manifold System are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Intake Manifold System. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Intake Manifold System market.

In automotive engineering, the intake manifold system sits on top of the engine and is the last stop for air before it enters the cylinder heads. The air intake manifold is made of molded metal or plastic tubes which ensure proper mixing of air with fuel.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world,

Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022. The automotive intake manifold distributes air to the engine cylinders and is an important part of the engine. In older cars without fuel injection, the fuel-air mixture is transferred from the carburetor/throttle body assembly to the cylinder head through the intake manifold. The urban population has grown significantly over the past two decades. Growth in urban population increases the need for transportation, thereby increasing the need for intake manifolds. The global economic recovery is expected to be stronger in the future. Rising output in the automotive and auto parts industry reflects accelerating world economic growth, driving the expansion of the market. Automakers are under constant pressure to reduce vehicle weight to improve fuel efficiency and vehicle performance. The automotive intake manifold market is expected to be driven by rising demand for energy-efficient vehicles during the forecast period. Additionally, automakers are investing funds in research and development for making lightweight vehicles, which is expected to drive the intake manifold market. Diesel engines primarily use the car's intake manifold to move filtered and dehumidified air toward the engine cylinders. The growth of the automotive intake manifold market is expected to be restrained during the forecast period owing to the increasing production and adoption of battery electric vehicles.
