Integrated multi way valve is a hydraulic control component that integrates multiple directional valve plates and related oil channels into a single valve block. All control functions, such as reversing of multiple work pieces, main safety valve, overload valve, etc., are centralized on this single valve body. Core structure: A complex integrated valve block with a large number of intersecting holes drilled inside. Components such as valve core, spring, and seal are installed in the reserved holes on the valve block. In 2024, global Integral Multi Way Valve production reached approximately 85 k units, with an average global market price of around US$ 5355 per unit.The annual production capacity of a single production line is about 20000 units, and the comprehensive gross profit margin is usually between 25% and 45%.

Upstream materials: integral valve block blanks, valve cores, seals, etc.

The downstream mainly consists of construction machinery manufacturers and agricultural machinery manufacturers.

Direct material cost: approximately 40% -55% of manufacturing cost;

Direct labor costs: accounting for approximately 3% -8% of manufacturing costs;

Manufacturing cost: approximately 40% -55% of the manufacturing cost.
