The global Integrated Circuit (IC) Test Clips and Adapters market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Integrated Circuit (IC) test clips are tools used for testing and programming integrated circuits by directly connecting the clip to the IC's pins. This allows engineers or technicians to perform fast and reliable electrical tests on circuit boards. These test clips typically feature spring-loaded probes to ensure good contact with IC pins and are suitable for various package types, such as SOIC and TSSOP. Adapters, on the other hand, are conversion tools that facilitate the connection between different types of IC packages and testing equipment. They support multiple package standards, enabling a single testing device to be compatible with different types of ICs, thus simplifying the testing and programming process. IC test clips and adapters are widely used in semiconductor manufacturing, electronic product development, and troubleshooting, helping to improve testing efficiency and accuracy.
