Primer-in-one electrocoat, also known as electrocoat or electroplating primer, is a type of coating that is typically applied through an electrophoretic process to create a uniform, dense coating on metals and other conductive surfaces. Known for its highly uniform distribution, good anti-corrosion properties and environmentally friendly properties, this coating is widely used in a variety of industrial and automotive manufacturing applications.

The bottom-surface integrated electrophoretic coating industry has broad development prospects, mainly due to the following reasons: 1. Environmental protection trend: Consumers and governments have increasing demand for environmentally friendly coatings. Water-based electrophoretic coatings have the advantages due to their low volatile organic content. Obvious environmental advantages. 2. Growth of the automotive industry: The automotive industry is one of the main application fields of bottom-in-one electrophoretic coatings. As global automobile sales increase, the demand for high-performance bottom-in-one electrophoretic coatings will also increase. 3. Development of new technologies: With the continuous innovation of coating technology, higher performance, more durable and more functional electrophoretic coatings may appear in the future to meet the changing market needs. 4. Growth in emerging markets: Some emerging markets, such as electronic equipment and new energy vehicles, will also provide growth opportunities for bottom-surface integrated electrophoretic coatings. To sum up, bottom-surface integrated electrophoretic coating is a coating type with wide application in many fields, and its future development

prospects are full of hope, especially in the fields of environmental protection and high performance.
