Hydrogen ammonia alcohol integration is a green energy chemical industry model that integrates the production of hydrogen energy, green ammonia and green alcohol (also known as "liquid sunshine"). The basic steps include using renewable energy sources such as wind and solar energy to produce hydrogen through electrolysis of water, and then combining hydrogen with nitrogen or carbon dioxide to synthesize ammonia or methanol, forming a complete industrial chain from energy production to chemical product manufacturing. This model improves energy efficiency and reduces costs while achieving zero carbon emissions and promoting green and sustainable economic development.
