## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Integrated linear motor shafts require linear guides to maintain the position of the movers in the magnetic field generated by the magnetic rails. In the same way as the encoders of rotary servo motors are mounted on the shaft for position feedback, integrated linear motor axes require feedback devices for linear position feedback - linear encoders, which directly measure the position of the load and thus improve the position accuracy of the load.
