The global Integrated Logistics Supply Chain Service market size is predicted to grow from US\$ 3425 million in 2025 to US\$ 7798 million in 2032; it is expected to grow at a CAGR of 12.6% from 2026 to 2032.

Integrated logistics supply chain services refer to providing end-to-end logistics solutions encompassing raw material procurement, production and transportation, warehousing management, and final product delivery through integrated technologies and management methods. This service coordinates activities across all links of the supply chain, optimizes resource allocation and information flow, achieves efficient logistics and supply chain operations, improves operational efficiency, reduces costs, and enhances responsiveness to market demands.

The integrated logistics supply chain service industry chain mainly consists of upstream information technology and logistics infrastructure providers, midstream integrated logistics and supply chain service providers, and downstream customer industries. Upstream includes transportation equipment, warehousing facilities, the Internet of Things (IoT), automated warehousing systems, transportation management systems (TMS), warehouse management systems (WMS), intelligent sorting and AGV equipment, blockchain, and supply chain visualization software, providing digital, intelligent, and traceable technological support for the entire logistics process. Midstream comprises core service links, including comprehensive services such as warehousing, transportation, distribution, inventory management, supply chain finance, supply chain optimization, and consulting, provided by professional logistics companies or third-party logistics providers (3PL/4PL) offering end-to-end integration. Downstream application industries cover manufacturing, retail, e-commerce, pharmaceuticals, FMCG, automotive, and cross-border trade. In terms of gross profit margin, integrated

logistics supply chain services belong to the service industry, and the overall gross profit margin is slightly higher than that of traditional transportation or warehousing. The comprehensive gross profit margin is usually between 20% and 35%, while the gross profit margin of high-end value-added services (such as supply chain optimization, smart warehousing, and cross-border logistics solutions) can reach 40% to 50%, while the gross profit margin of basic transportation and warehousing is about 15% to 25%.

Integrated logistics supply chain services are a key driver for modern enterprises to improve their competitiveness and operational efficiency. By integrating and optimizing all aspects of the supply chain, this service not only reduces operating costs and inventory levels, but also significantly improves delivery speed and customer satisfaction. In a global and highly competitive market environment, integrated logistics supply chain services can help companies respond to market changes more flexibly, respond quickly to customer needs, and maintain transparency and controllability of the supply chain, becoming an important pillar for the sustainable development of enterprises.
