The global Integrated Multi-Omics Services market size is predicted to grow from US\$ 1321 million in 2025 to US\$ 3077 million in 2032; it is expected to grow at a CAGR of 12.9% from 2026 to 2032.

Integrated Multi-Omics Services refer to professional technical services that systematically integrate and analyze data from multiple omics disciplines, including genomics, transcriptomics, proteomics, metabolomics, and epigenomics, through advanced bioinformatics pipelines, computational technologies and statistical methods, which aim to break the limitations of single-omics analysis, reveal the interactions and regulatory mechanisms among different molecular layers, and provide a comprehensive and in-depth understanding of biological systems, health status and disease mechanisms for researchers, pharmaceutical enterprises, medical institutions and other clients, with the flexibility to customize solutions according to specific research or application needs.

The demand for Integrated Multi-Omics Services is growing rapidly driven by multiple factors: the increasing complexity of biological research and clinical diagnosis requires a holistic analytical approach to make up for the shortcomings of single-omics analysis, the booming development of precision medicine and AI drug discovery has boosted the demand for multi-omics data integration to identify biomarkers and therapeutic targets, and the continuous decline in sequencing costs and the maturity of AI and cloud computing technologies have made multi-omics analysis more accessible for academic institutions, pharmaceutical companies and agricultural institutions; corresponding business opportunities are prominent, as the global multi-omics services market is projected to grow at a high compound annual growth rate, with North America as the largest market and the Asia-Pacific region as the fastest-growing market, and key

opportunities lie in customized service development for oncology, neurological disorders and other fields, integration of AI and machine learning into analysis workflows, expansion of application scenarios in agricultural breeding and environmental monitoring, and provision of one-stop solutions including data collection, analysis and interpretation to meet the diverse needs of different end-users.
