The Integrated Platform Management System is a unified integrated digital computational and control complex built-up on the basis of microprocessor technology, which ensures control and monitoring of the Main Propulsion Plant (MPP CS), Power Generation and Distribution System (PGDS CS), Auxiliary Ship Systems (ACS CS), Ship Motion and Maneuvering (SM CS) and maintains communication with the Integrated Bridge System (IBS). Such integration enhances information and functional capabilities of the crew in the process of controlling the maritime object, ensuring navigational safety of voyage and use of special equipment. The integration of the system also eliminates standalone third party control equipment reducing space, weight and cabling and providing increased supportability through commonality.
