Integrated Power Brake (IPB) is a braking system that combines the functions of the hydraulic braking system with the electric vacuum brake booster. The IPB system is designed to provide efficient and reliable braking performance for modern vehicles. The IPB system solves this problem by providing the necessary vacuum pressure to the brake booster with an electric motor. The electric motor is controlled by the electronic control unit (ECU), which can adjust the amount of vacuum pressure generated by the

motor to provide consistent and reliable braking performance. The ECU can also monitor the performance of the brake system and make adjustments to ensure the normal operation of the brake.
