The report requires updating with new data and is sent in 48 hours after order is placed.

It is an integrated power stage solution optimized for synchronous buck applications to offer high current, high efficiency, and high power density performance. Today's data centers account for 2% of the world's energy use. And that percentage is rapidly growing to more than 5%. Data center power losses cost operators millions of dollars. Using Integrated Power Stages Module results in more efficient power conversion in Point-of-Load applications. This results in significant cost reduction at the system level and at the company OPEX level.
