The global Integrated Sphere Spectroradiometer Test System market size is predicted to grow from US$ 310 million in 2025 to US$ 424 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

The integrated sphere spectroradiometer test system is an optical test system that uses an integrating sphere as a measuring device. It is used to accurately measure the luminous flux, chromaticity, electrical parameters and other performance indicators of light sources or lamps, and has the ability to measure multiple parameters simultaneously with high precision. Through the built-in high-precision spectrometer and photometer, it can accurately capture and analyze photochromatic and electrical data in the uniform light field of the integrating sphere, thus providing a reliable basis for the research and development and quality control of lighting products. The advantages of this system are its fast test speed, good data repeatability and stability, and the ability to achieve one-click automated testing, which greatly improves test efficiency and accuracy. In addition, it also supports remote control and data cloud storage, which facilitates data management and analysis for large-scale production and laboratories.
