The integrated temperature transmitter is a perfect combination of temperature sensor and transmitter. It converts the temperature signal in the range of -200~+1600 ° into a two-wire 4~20mA DC electrical signal in a very simple way and transmits it to the display instrument, Regulators, recorders, DCS, etc., to achieve accurate temperature measurement and control. The integrated temperature transmitter is an updated product of temperature measurement and control in modern industrial sites and scientific research institutes, and is an essential product for distribution systems and digital bus systems.

The global market for Integrated Temperature Transmitter is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028.
