An integrated wellhead skid refers to a modular skid-mounted system that integrates wellhead equipment, christmas tree, control systems (such as hydraulic control panels/WHCP), safety valves, and associated manifolds into a single packaged structure. It enables rapid installation, centralized control, and safe operation of oil and gas wells, and is widely used in onshore oilfields, offshore platforms, and modular field development projects.

The upstream of integrated wellhead skid systems includes high-strength alloy steel, corrosion-resistant materials, sealing components, and hydraulic control parts, as well as valve, manifold, and control system module suppliers. The midstream consists of wellhead system integrators and EPC equipment providers responsible for modular integration and skid-mounted fabrication of wellhead, christmas tree, and control systems. Downstream applications are mainly oil and gas exploration and production companies, offshore platform operators, and onshore field developers, which require high safety, reliability, and fast deployment capability.
