The research report highlights the growth potential of the global Intelligent Braking Systems market. Intelligent Braking Systems are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Intelligent Braking Systems. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Intelligent Braking Systems market.

Automobile intelligent braking system (IBS) is called electric brake booster. It is composed of mechanical device and electronic control unit. It senses the force and speed of the driver stepping on the brake through the sensor, and transmits it to the electric control unit. After the signal processing, the electronic control unit transmits the signal to the servo motor in the booster mechanism. Driven by the amplification mechanism of mechanical transmission, the main brake pump is pushed to work, so as to realize electricity Control action.

?? ??

The types of IBS market mainly include Two-Box and One-Box type. In 2019, the

production of two box accounts for 65% of the total market share. IBS is used in pure electric vehicles and hybrid vehicles, and its main production areas are North America, Europe, Japan and China.
