The Intelligent Dosing System is a dynamic regulation device based on automated control and real-time data feedback, integrating sensors, actuators, and intelligent algorithms to achieve precise dosage control of fluid media (e.g., solutions, suspensions). Its core functions include real-time monitoring of target parameters (e.g., concentration, flow rate, pH), closed-loop feedback adjustment based on preset thresholds, and optimization of dosing strategies through machine learning models. The system automatically compensates for environmental disturbances (e.g., temperature fluctuations, viscosity changes) affecting dosage accuracy and features adaptive calibration and fault prediction capabilities to ensure process stability and reproducibility.
