The research report highlights the growth potential of the global Intelligent Electronic Guide Dog market. Intelligent Electronic Guide Dog are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Intelligent Electronic Guide Dog. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Intelligent Electronic Guide Dog market.

The electronic guide dog is a new type of intelligent assistive device that adds new sensors and computing units to help visually impaired people with daily actions and navigation.

There are currently more than 40 million blind people in the world, but the number of truly qualified guide dogs does not exceed 100,000. Training a guide dog takes a long time and is expensive, and the working life of each guide dog is only about 10 years. At the same time, some visually impaired people are allergic to pets, and many public places do not allow guide dogs to enter. Therefore, it is not easy to popularize guide dogs. In this case, the emergence of electronic guide dogs has solved the shortcomings of guide dogs being expensive and having few use occasions.
