Intelligent Flexible Exoskeleton Robot (IFER) is a type of exoskeleton robot that combines artificial intelligence and advanced materials to create a wearable robot that can adapt to the user's movements and provide assistance when needed. IFER is designed to be lightweight and flexible, with sensors and actuators distributed throughout the exoskeleton to monitor the user's movements and provide assistance in real-time. IFERs are typically made of advanced materials such as carbon fiber or Kevlar, which are strong and lightweight, and allow for greater flexibility and mobility. They are also equipped with sensors and actuators that can detect the user's movements and provide assistance as needed, such as supporting the user's limbs during strenuous activities or providing additional strength to help lift heavy objects.
