According to this study, the global Intelligent Garbage Truck Management System market size will reach US\$ 305 million by 2031.

Garbage Truck Management System is an intelligent platform that integrates GPS positioning, Internet of Things, wireless communication and data analysis technologies. It is mainly used for real-time dispatching, route optimization, operation monitoring, operation records and energy consumption management of garbage collection and transportation vehicles. Through comprehensive perception and data processing of vehicle location, operation status and overflow of garbage bins, the system can effectively improve the efficiency of sanitation operations, reduce resource waste, and help managers make scientific decisions.

In the future, the garbage truck management system will develop in the direction of intelligence, platformization and green low-carbon. The system will further integrate artificial intelligence, big data and cloud platforms to achieve automatic dispatching, fault prediction and cross-departmental collaborative management, while adapting to the charging and endurance management needs of new energy vehicles. With the advancement of smart city construction, the system will become an important part of urban refined management and garbage classification closed loop.
