Intelligent Inspection Device refers to an automated monitoring system that uses sensors, cameras, and embedded intelligence to detect, analyze, and report the operating condition of equipment or facilities without continuous human presence. By integrating technologies such as computer vision, data processing, and wireless communication, the device can identify abnormalities—such as overheating, vibration, leakage, or intrusion—and transmit real-time alerts to a central monitoring platform for maintenance or safety response. Upstream, it relies on imaging modules, infrared sensors, gas detectors, processors, communication modules, and power systems; midstream manufacturers develop hardware integration, control software, and data analysis algorithms; downstream, intelligent inspection devices are widely used in power systems, industrial plants, transportation infrastructure, security monitoring, and public facilities to improve operational reliability, reduce manual inspection workload, and enable predictive maintenance.
